I needed more about the pathways and less about disease Yet it was well writtten on diseases.For what I needed it was not enough

The section on female physiology and contraception is not well-researched. She briefly discusses natural methods of family planning, yet her description is incorrect. She talks about charting basal body temperature and mucus for the rhythm method, and this is not how the rhythm method works. What she is trying to describe is the sympto-thermal method, which has 99.6% method effectiveness because it the basal body temperature and mucus in order to observe real-time changes in hormones such as estrogen and progesterone.
